

# Kidlogger Delogger

By Ben Pham

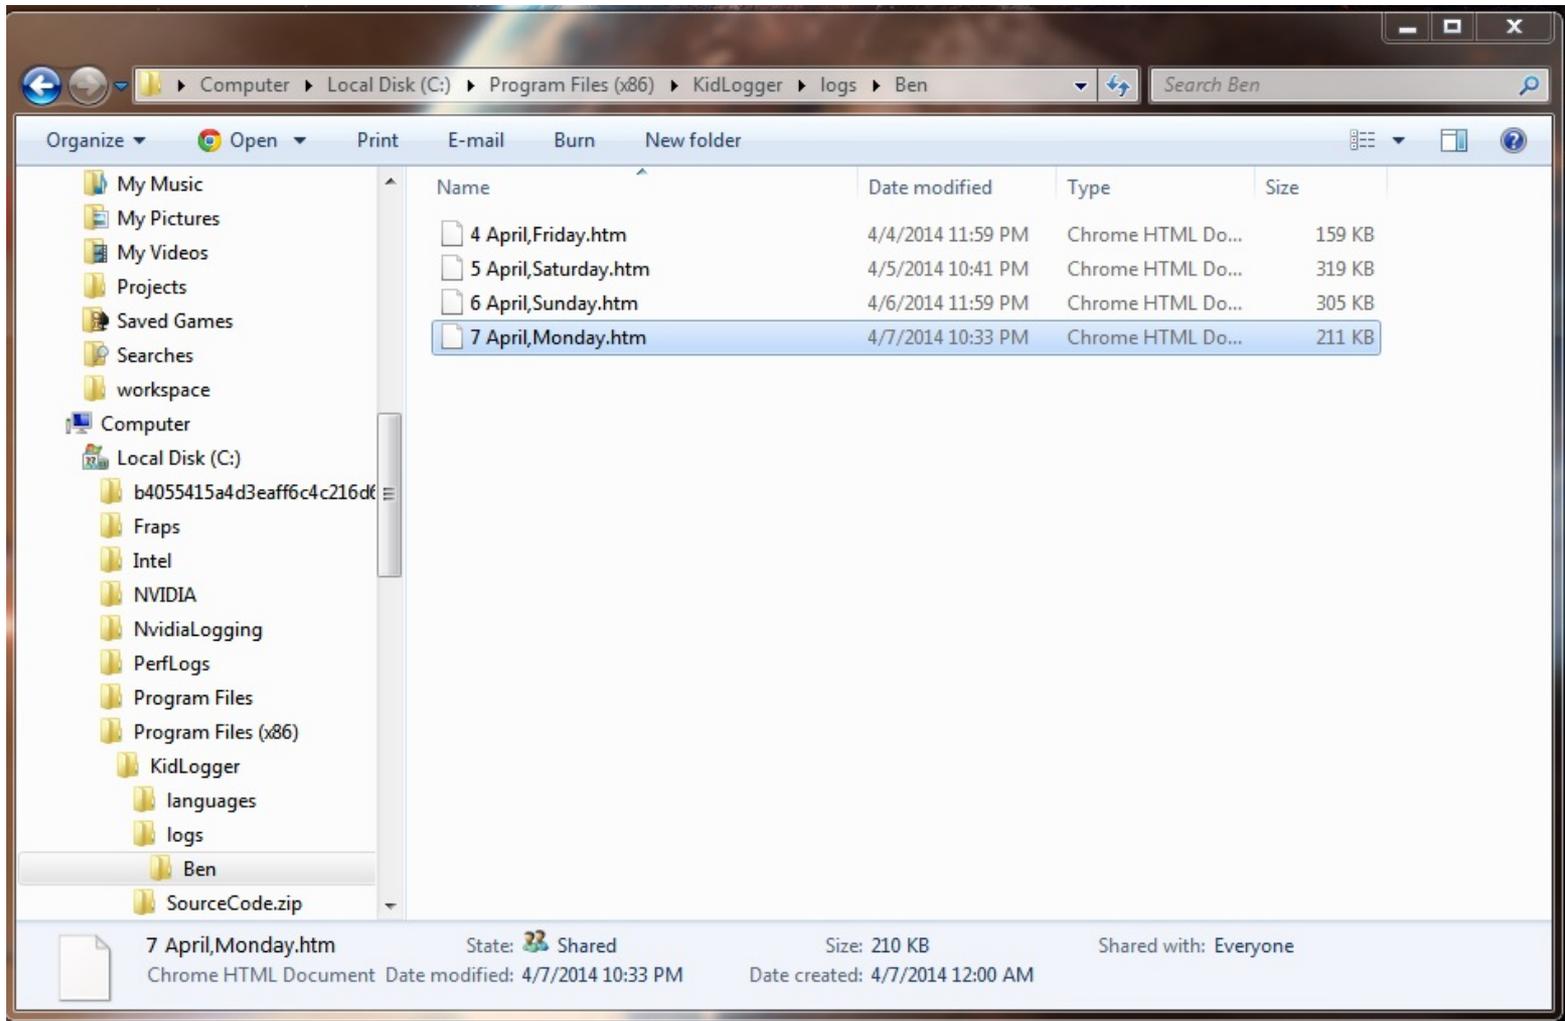

Created with Python 3.3.3

Compiled with CxFreeze

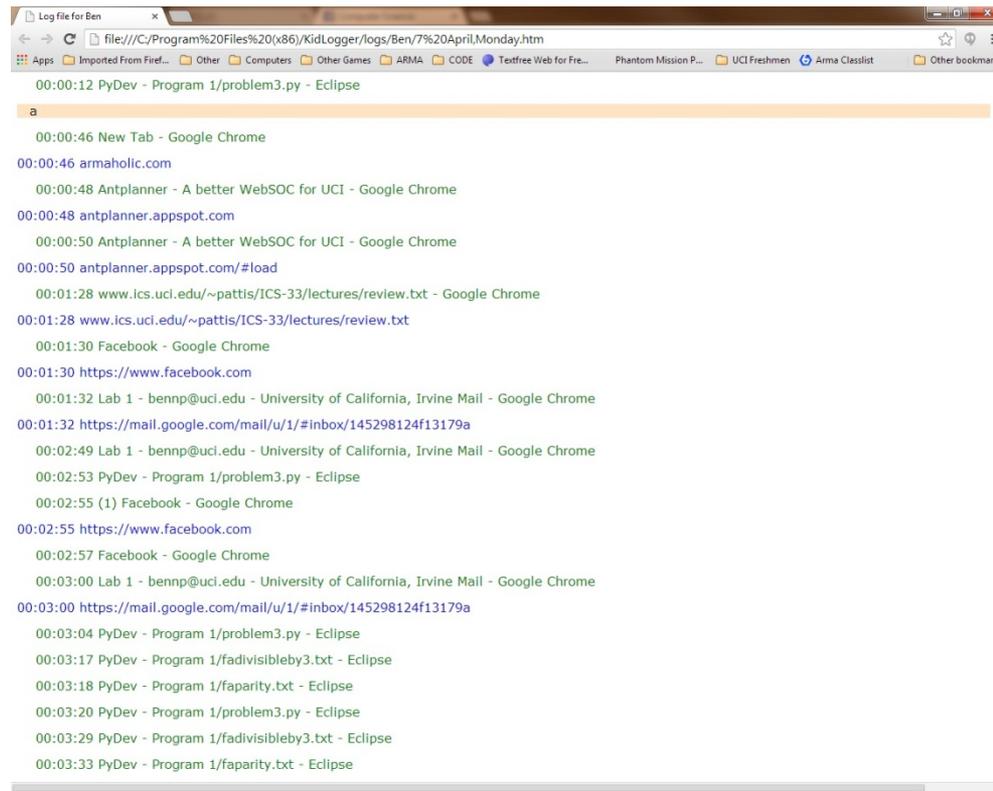

- Unzip/extract the **kidlogger\_keydelogger.zip** somewhere on your computer

- Go to your `\Kidlogger\logs\*Your Name` folder and open up one of the `.htm` files

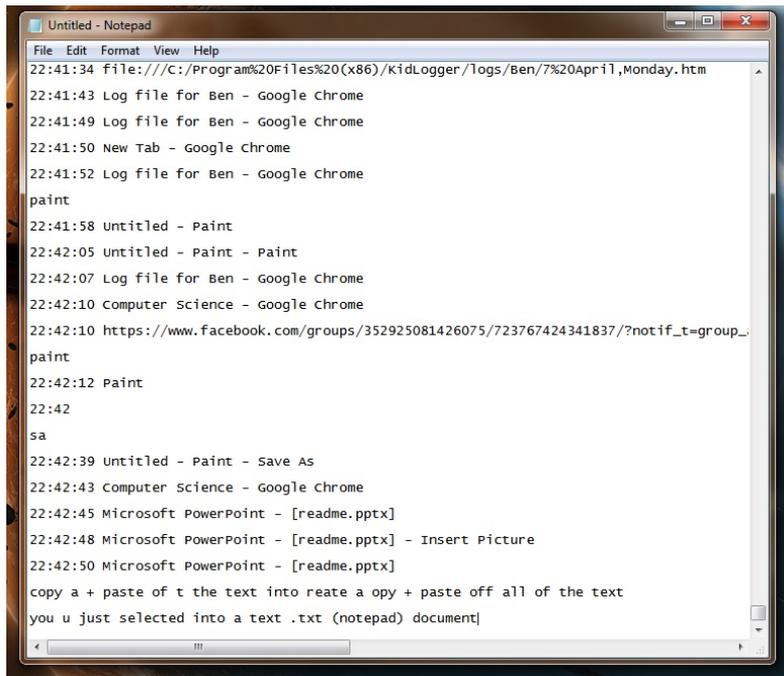

- You should get something like this.

```
Log file for Ben
file:///C:/Program%20Files%20(x86)/KidLogger/logs/Ben/7%20April,Monday.htm

```

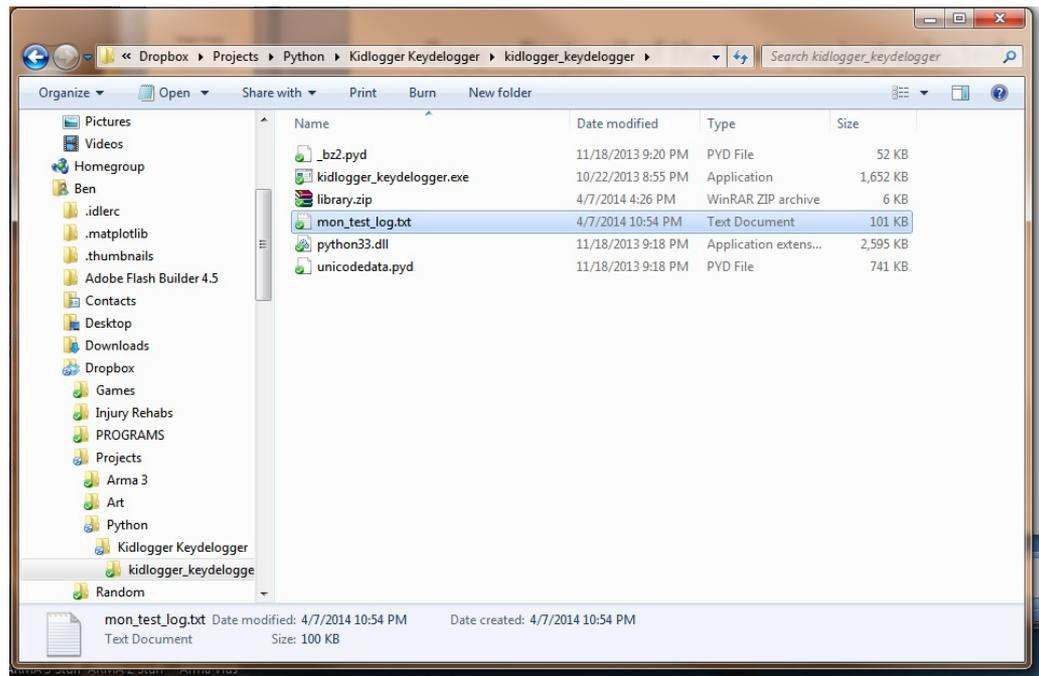

- Hit **CTRL+A** (Windows) or **COMMAND+A** (Mac) or any equivalents for SELECT ALL while the web browser .htm file is selected to select all the text from the .htm file.

- Copy + Paste all of the text you just selected into a **.txt** (notepad) document and put it inside the **kidlogger\_keydelogger** folder

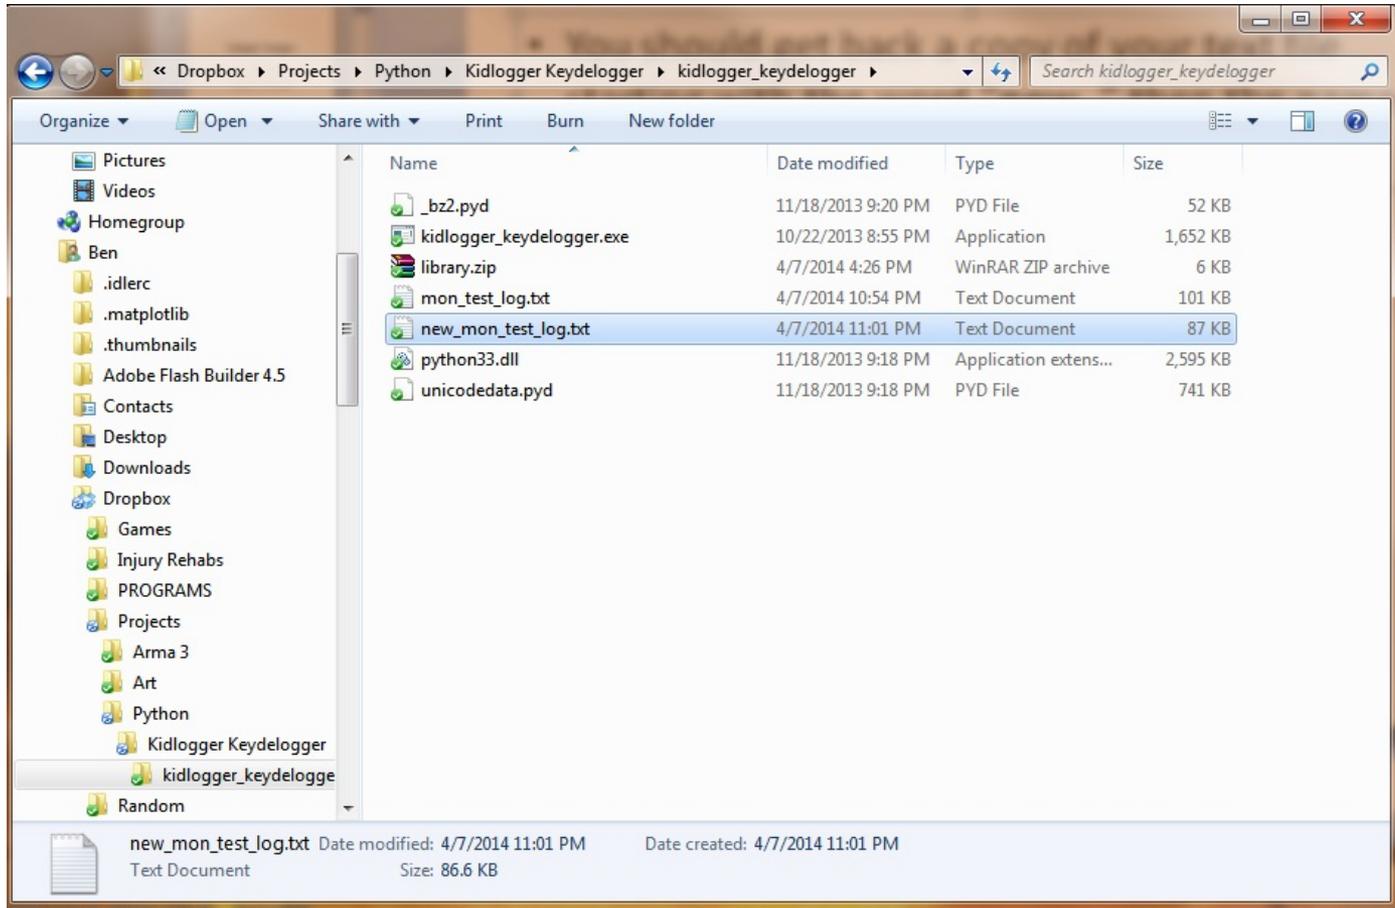

Untitled - Notepad

```

copy a + paste of t the text into reate a opy + paste off all of the text
you u just selected into a text .txt (notepad) document]
```

- Once you're done just hit the **kidlogger\_keydelogger.exe** and you're good to go

- You should get back a copy of your text file starting with the word “**new\_**” then the name of your text file

- You can have as much text files of log as you like. You only need to run the kidlogger\_keylogger.exe once and it will create a copy of all the text files in this folder

- Let's compare the old & new files

```

- No more logged keystrokes

# DISCLAIMERS

- It is best to move your new log files to a new folder once you're done to avoid multiple repetitive duplications.
- If you logged your IM messages, this application will not remove it because it has a timestamp on there.
- Please go Kidloggers → Options
  - Uncheck everything except **Log Websites URL**
- This application will delete all lines in the text file without a timestamp or Computer is Idle
- This application will create a new text for all .txt files inside your kidlogger\_delogger folder
